CHAPTER V
CONCLUSION AND SUGGESTION

This chapter describes the conclusions and suggestions based on the result of this research.

5.1 Conclusion

Based on the result of analyzing the data, the researcher conclude that Mind Mapping Technique give no a significant effect on Tenth Graders reading comprehension of MAN 1 Muara Bungo. For the students’ perspective, the Tenth Graders of MAN 1 Muara Bungo gives a positive result of the responses, comments and opinions. They were satisfied and more motivated to learn reading using mind mapping. In addition, the Tenth Graders of MAN 1 Muara Bungo also showed the lower to higher performance of mind mapping they made. Some of them were understand the concept of mind map. They create mind map briefly and related with the concept given by the researcher before.

5.2 Suggestion

Based on the conclusion of the study, there are four things that the researcher would like to suggest. First, students should be aware of the new learning technique that they can use to support their learning process, because one technique maybe works better than the other. Also, the students have to be concern of the learning technique that suit them best. Second, to the teachers, it should be careful in choose the best teaching technique and strategy to make sure that the students understand any of material explained by the teacher. Third, to the other researchers, this study might
be used as a comparison to the other research that mind mapping technique may not give a significant effect to some students. The last, the school should support the teachers in implementing a technique by giving proper time, place, and facilities for the success of transfer the knowledge from the teacher to the students.
