ABSTRACT

This study aims to determine the comparison of the management of the cash management of the Sa'adatul Khidmah Mosque at the time before the Covid-19 pandemic and during the Covid-19 pandemic faced by the management of the Sa'adatul Khidmah Mosque regarding cash management and potential funds owned by the mosque. In managing funds, the mosque is still unable to make good use of the funds owned by the mosque. The approach used in this research is descriptive approach. The results showed that there was a very visible comparison of funds that came in before the existence of this pandemic and during the pandemic, the management was not able to process funds properly because there were still many funds that had accumulated and had not been distributed but some of the funds had been used properly even though during the pandemic it had potential funds that were lower. There are obstacles faced in mosque cash management, namely the management does not understand the funds that must be managed properly and does not accumulate mosque funds
