Reviewer A:

Bahasa dan tata tulis diperbaiki.

Fakta hasil riset terdahulu sebagai pendukung argumentasi masih sangat minim.

Manfaat kajian belum dideskripsikan secara eksplisit.

Deskripsi populasi, teknik sampling, analisis data belum jelas.

RESULTS AND DISCUSSION: Dikaji secara terpisah.

REFERENCES: gunakan jurnal CP dan ikuti APA style.

Reviewer B:

This paper describes an interesting topic in mathematics learning. However, there are few things to clarify:

1. Abstract: minimum is 150 words. The authors can add a sentence about the participants of the study
2. Introduction: Add significance of the study to the literature. By describing the recall, what is it for?
3. Method: need to describe the background of the participants of the study, the learning material, and how long the study intervention is.
4. Results and discussion should be written separately. I am particularly confused with the regression. There is no assumption test, and the participants are not quite covered this purpose. Perhaps, simple correlation is okay, and strengthen by the interview and documentation results.

5. Discussion must include meaning of the results. The interview seems superficial, therefore explanation from this is not in depth. Additional data would be better to give readers understanding about the recall and problem solving process.
6. Conclusion should not just repeat the results, but give meaning from the discussion. Semua data M harus disertai SD. Dalam simpulan tidak perlu ada angka-angka lagi.
7. Reference list is not yet consistent to the author guidelines.
