## APPENDICES

R	Describe your view regarding the most dominant external factors that cause problems or obstacles in succeeding the writing and publication of your research article?
I	My apprehension towards both negative feedback makes me feel stressful to write the research article or submit it to a journal. When I first received

	corrections from the supervisors, I just read and mark them. I tried to forget what I see. I came back to see it after several weeks.
R	I am interested in discussing other factors which influence the emergence of barriers, obstacles, problems, or blocks in writing and publishing an English research article, including linguistics, cognitive, social, and physical issues.
R	Tell me about your experiences in dealing with linguistics issues such as grammar, vocabulary, and structure during an English research article writing at your campus.
I	Grammar is very important. I believe in it. The problem is I have a serious problem to make a good grammatical sentence. Let's imagine if I have to make thousands sentences with correct grammar. I cannot imagine how I can do that.
R	Have you studied grammar before?
I	I still remember that I have studied basic English grammar by Betty Azar since senior high school. Until now, I know some important tenses such as simple, past, and perfect tense. They are just enough knowledge to make good sentences for daily use.
R	Tell me about your opinions in dealing with cognitive issues such as English writing complexity that emerge when you writing an article and have it proceeded to be published in a national accredited journal?
I	I think article writing become complicated as it requires an author to follow rules such as template, academic diction, formal grammar, and interesting content.
R	What is your expectation?
I	From each rule, I am sure my research about English teaching and learning based on Merdeka Belajar program is interesting. What I feel hard to do is to fulfill the template and select particular academic vocabularies among millions words in English dictionary.
R	Tell me your views regarding social issues such as collaboration with other researchers or authors and interaction with supervisor that may affect the emergence of barriers or obstacles in writing an English research article?
I	Alhamdulillah, I do not have any problem with my classmates who also do research in similar topic. Whenever I do not understand Merdeka Belajar concept, I ask them without any awkwardness feeling. I only feel bad at consulting with the supervisors whom I believe to give me various corrections that I do not wish. I feel hard to meet up with them and discuss my research article.
R	Tell me your ideas about physical issues such as environment and facility that affect the success of your English research article writing and its

	publication to a national accredited journal.
I	I hope in the future my juniors will get a complete guide on writing an English research article from the campus. I did not get any and I was lost to find one from other resources or campuses. There is no exact guideline to be followed so far.
R	Is the unavailability of such writing guideline a source of successful article writing?
I	Yes, may be. Let's imagine if we do not have a syllabus or handbook in a grammar course. It can be a problem for both teacher and students. As a student, I do not have specific guide to be believed in writing an article right now. Writing guide from the university prevents students from saying nonsense regarding English research article rules.
R	Tell me your thoughts about affective issues such as motivation or positive thinking and how it becomes a factor regarding English research article writing barriers.
I	I think my negative thinking towards corrective feedbacks forces me to overthink about my own supervisors' attitudes and reviewers' actions towards the article I submitted. I should not do this. I have to face every challenge from the article writing and journal.
R	Is corrective feedback frightening you or is it just a matter of bad feeling?
I	It is a hard question, indeed. Corrective feedback is frightening, indeed, but negative feeling towards a negative phenomenon will never make it good, right? Imagine when a beginner author has to write a research article and submit it to an accredited journal. It must be tough, then.
