BAB V

CONCLUSION AND SUGGESTION

1.1   Conclusion

This development research has been done with a product of a textbook for drop out children based on local pottential atrraction Danau Sipin Jambi. This research used ADDIE model for the development procedure. These stages of this development research staterd from analysis stages where the reseracher analyze the children's needs through questionnaire, document and library analysis. Then, the researcher start to designing the textbook by determining the objectives of the presented material based on the analysis stage, developing the textbook based on the stages. Due to the limitation of time and situation, this development research were terminated until development stage.

The textbook as the product of this development research had been validated by two experts, which are material expert and media expert. The result showed that the materian validator scored 88% for the content aspect and 90% for the usability of the textbook, and it categorized as "Excellent". Then, the media validator scored 85% for the presentation whixh categorized as "Excellent". Then, the media validator scored the cover design 80%, and for the usability of the textbook were scored 80%, both of that aspects were categorized as "Good". After get validation and revised the textbook based on the validator suggestions, it can be concluded that this textbook can be used as the material for teaching English especially for informal education.

1.2   Suggestion

This researcher showed the process of developing english textbook for drop out children based on local pottential attraction Danau Sipin Jambi. The textbook will be used to teach drop out children or in informal education. Hopefully this textbook can be an alternatice for all the teacher that has interest in teaching process especially for drop out children and give the drop out children opportunity to take the package B equivalancy exam equpped with pther subject matters. This research was done until development stage. Therefore, further

research of other researchers who are interest in the same field will be needed to implement the textbook and to find the effectiveness of the textbook. The result of the research hopefully can be used as on the references for learners, lecturers, or other researcher.
