CHAPTER V CONCLUSION AND SUGGESTION

This chapter consists of two sections, the first section dealt with the conclusion of findings of the research and the other one deal with suggestion.

5. 1 Conclusion

This survey research took 1-4 semester in engineering faculty as sample for this research, 2 classes they were mining class 1 batch 2023 and mining class 1 batch 2022 and the pilot data only 1 classes the were electrical class 1 batch 2023

Based on the findings and discussions, the researcher concluded that almost all of the students have positive attitude toward the lecturer use bilingual language in classroom , These results can be seen from the cumulative result of the statements of 'Agree' and 'Strongly Agree' are higher compared to the statements of 'Disagree' and 'Strongly Disagree', and also was shown by the mean score 4,1 while there are only very few less number of students have negative attitude toward the feedback given by the lecturer use bilingual language. And the the researcher concludes bilingual language by lecturer in classroom can increased their English skills and motivate the students to learn English more. It also improved their confidence to speak up, helped them to understand more of English

Thus, bilingual language can be implemented in University Jambi espesialy in faculty of engineering by the English lecturer and the researcher concluded that the students had positive attitude toward lecturer bilingual language use in English classroom.

5. 2   Suggestions

Based on the conclusion above, the researcher presents some suggestions as follow:

For English lecturer at engineering faculty especially in mining department, It is suggested to lecturer can be better in using the language instruction in the EFL classroom, which is it will be useful and makes students easier in the learning English process.

For Other Researchers The researcher realized that this study is far from being perfect. There are still many weaknesses that can be found in this study. Generally, for other researchers who want to conduct similar research, they are suggested to improve this research with better design and different object in order to support the results finding.
