CHAPTER V

CONCLUSION AND SUGGESTINON

5.1 Conclusion

Having explained the findings obtained in this research, the researcher can conclude two major points. First, the participant which are the fifth semester students of English Education Study Program in Jambi University, mostly used Conventional Indirect request in Query Preparatory, followed by Direct Level of request and Non-conventional Indirect request.

Second, for the modification devices, the participant frequently used External Modifiers which employed 52 times; 19 times head, 17 times grounders, 6 times preparators, 3 times sweetener, 4 times imposition minimize, 2 times alerters, 1 time promise of reward in 6 different created situations. They preferred to used this modifiers than the Internal Modifiers.

5.2 Suggestion

Based on the findings of this research, the researcher found that the participant made several mistake such as grammatical error, and transferring their L1 to L2, it's seems the participant lack of pragmatic knowledge and they did not really look to the target language patterns. There are several sentences that the participant said did not match with the target language. Therefore, the researcher suggest the lecture to teach their students more about pragmatic, and cultural understanding in order to make the students know how to perform their L2 well based on the target language, in order to minimize misunderstanding.

The researcher also suggests the students to used English frequently to make them usually in making communication with other or foreign, and to improve their speaking skill. The

students also need to understand more about pragmatic and cultural form their target language to make them know how to interact with other people if they have plan to continue their study aboard.

Last, for English Education Study Program Students who are interested in conducting a research about request strategies, the researcher suggest to the next researcher to read a lot of books and find a lot of theory that related to speech acts and request strategies and also another research of modification devices, and to find the natural data, the researcher need to observe the participant or target and decided the time to take the data, in order to make the data pure without manipulated the situation. The next researcher can used this research to be their preference.
