ABSTRACT

This study aims to: 1) analyze the condition of credit interest rates, BOPO, NPL, and the distribution of working capital loans at Bank Perkreditan Rakyat (BPR) Citra Sahabat in Jambi City; and 2) analyze the relationship between credit interest rates, BOPO, and NPL with the distribution of working capital loans at BPR Citra Sahabat in Jambi City. Secondary data were obtained from annual financial reports, and Kendall's W correlation was employed as the analytical method. The results show that the average credit interest rate was 18.56 percent, BOPO 89.19 percent, and NPL 16.81 percent. Kendall's W test indicates a significant relationship between these three variables and the distribution of working capital loans. The findings emphasize the importance of managing credit interest rates, improving operational efficiency, and controlling non-performing loans to enhance the effectiveness of working capital loan distribution.
